Microbiological Reviews

VOLUME 44 • NUMBER 1 • MARCH 1980

EDITORIAL BOARD

HOWARD V. RICKENBERG, *Editor* (1984)
National Jewish Hospital and Research Center
Denver, Colo.

Giovanna Ferro-Luzzi Ames (1982)
Priscilla A. Campbell (1980)
Ercole Canale-Parola (1981)
Rowland H. Davis (1981)

Neal B. Groman (1982)
Phillip E. Hartman (1981)
Elmer R. Pfefferkorn (1980)
Jeanne S. Poindexter (1982)

Barry P. Rosen (1982)
David Schlessinger (1981)
Patricia G. Spear (1982)
Meyer J. Wolin (1980)

EX OFFICIO

Willis A. Wood, *President* (1979–1980)
Albert Balows, *President-Elect* (1979–1980)

J. Mehzen Joseph, *Secretary*
Brinton M. Miller, *Treasurer*

Robert A. Day, *Managing Editor*

Gisella Pollock, *Assistant Managing Editor*
David R. Elwell, *Production Editor*
1913 I St. NW, Washington, DC 20006

Microbiological Reviews considers for publication both solicited and unsolicited reviews and monographs dealing with all aspects of microbiology. Manuscripts, proposals, and correspondence regarding editorial matters should be addressed to the Editor, Dr. Howard V. Rickenberg, Division of Molecular and Cellular Biology, National Jewish Hospital and Research Center, Denver, CO 80206.

Microbiological Reviews (ISSN 0146-0749) is published quarterly (March, June, September, and December), one volume per year, by the American Society for Microbiology. The nonmember subscription price is \$30 per year; the member subscription price is \$9 per year. Single issues are \$8. Correspondence relating to subscriptions, reprints, defective copies, availability of back issues, lost or late proofs, disposition of submitted manuscripts, and general editorial matters should be directed to the ASM Publications Office, 1913 I St., N.W., Washington, DC 20006 (area 202 833-9680).

The code at the top of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal use, or for personal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per-copy fee through the Copyright Clearance Center, Inc., P.O. Box 765, Schenectady, New York 12301, for copying beyond that permitted by Sections 107 and 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale.

MICROBIOLOGICAL REVIEWS

INSTRUCTIONS TO AUTHORS

Scope

Microbiological Reviews accepts reviews and monographs dealing with all aspects of microbiology and other fields of concern to microbiologists, such as immunology. Authoritative and critical reviews of the current state of knowledge are preferred, although historical analyses will be accepted if the importance of the subject justifies this approach. Unevaluated compilations of the literature and annotated bibliographies do not fall within the scope of *Microbiological Reviews*. Manuscripts of lectures delivered at symposia and round tables are likewise unacceptable; however, their authors are encouraged to discuss with the Editor the possibility of using such material as the basis for preparation of a review, when publication in this form seems appropriate. Because a distinctive goal of the journal is to appeal to the interests of the diverse group of subscribers, authors are asked to address themselves to both specialists and generalists; this demands conscious concern for this goal in writing.

Monographs should embody the results of unusually extensive and well-rounded original investigations, the usefulness of which would be diminished by publication in the form of a series of separate papers. Past experience suggests that the monograph is particularly appropriate for the presentation of a definitive study on the biology of a microbial group.

Members of the Editorial Board will welcome any suggestions of topics and authors, either from prospective authors or from others. Prospective authors are advised to discuss with the Editor the suitability of their proposed contribution. The preparation of an annotated topical outline is desirable, since it often elicits constructive suggestions from editorial consultants. In addition, a list of key references showing the author's contributions to the field and a one- or two-paragraph statement detailing the aim, scope, and relevance of the review should be included with the outline.

How to Submit Manuscripts

Submit two complete copies of each manuscript, including figures and tables, either in the original typescript or as clear, clean photocopies. All text should be double- or triple-spaced, including quotations, tables, figure legends, and references, and the pages must be numbered sequentially.

Original drawings should not be submitted; glossy prints are required. When appropriate, magnification should be indicated by a suitable scale on the photograph. Each figure should be numbered and should include the name of the author, either in the margin or on the back (marked lightly with a *soft* pencil). Papers should seldom exceed 60 manuscript text pages; any excess will require discussion with the Editor. A review, whether invited or not, cannot be finally accepted until the finished product has been examined and found to be satisfactory.

Editorial Style

The editorial style of *Microbiological Reviews* conforms to the *Council of Biology Editors Style Manual* (4th ed., American Institute of Biological Sciences, 1978) and Robert A. Day's *How to Write and Publish a Scientific Paper* (ISI Press, 1979), as interpreted and modified by the Editorial Board and the ASM Publications Office. It is usually desirable to include a table of contents showing the major headings and subheadings of the text. Consult a recent issue of *Microbiological Reviews* for format and style. It is preferable to summarize supporting evidence whenever possible. When original data are presented, it is essential that the methods be fully described or that reference be made to previously published methods.

Literature Cited. References should be listed alphabetically according to the last name of the first author, numbered serially, and cited by number in the text. Carefully examine a current issue for style and format. Each reference cited should be checked with the original publication; titles and both first and last pages should be included. References to unpublished data, abstracts, theses, and personal communications should be kept to a minimum; if unavoidable, these citations should be made in the text only, not in the list of references. Names of journals are abbreviated according to *Bibliographic Guide for Editors & Authors* (American Chemical Society, 1974).

Abbreviations and symbols. All abbreviations used (except those for standard units of measurement) should be defined parenthetically at first use in the text. Biochemical nomenclature, including abbreviations and symbols, should follow the recommendations given in *International Union of Biochemistry Biochemical Nomenclature and Related Documents* (reprinted for The Biochemical Society, London, England, 1978) and the Instructions to Authors of the *Journal of Biological Chemistry* and *Archives of Biochemistry and Biophysics* (first issue of each year), which are based upon these recommendations.

For measurements, use the International System of Units, employing the prefixes m, μ , n, and p (for 10^{-3} , 10^{-6} , 10^{-9} , and 10^{-12} , respectively), where applicable, and avoiding such compound prefixes as $m\mu$ and $\mu\mu$.

Nomenclature. In general, the nomenclature of bacteria should follow that presented in *Bergey's Manual of Determinative Bacteriology* (8th ed., The Williams & Wilkins Co., 1974). It is recommended that a strain be deposited in a recognized culture collection when that strain is necessary for the description of a new taxon (see *Bacteriological Code, 1976 Revision*, American Society for Microbiology, 1975).

For enzymes, use the recommended (trivial) name assigned by the IUPAC-IUB Commission on Biochemical Nomenclature as described in *Enzyme Nomenclature* (Elsevier Scientific Publishing Co., 1972) and supplement (*Biochim. Biophys. Acta* **429**:1–45, 1976).

Genetics symbols introduced by the reviewer should essentially follow the recommendations of Demerec et al. (*Genetics* **54**:1–74, 1966) and those given in the Instructions to Authors of the *Journal of Bacteriology* (January issue).

Copyright

It is the author's responsibility to obtain permission from the copyright owner to reproduce figures, tables, or quotations of more than 12 lines of text taken intact from previous publications, either his own or those of another author. Note that the journal or publisher (not the author) is the copyright owner; however, as a matter of courtesy the author's permission should be obtained as well.

To maintain and to protect the Society's ownership and rights, and to be able to protect the original authors from misappropriation of their published work, ASM requires authors to sign a "copyright transfer agreement." This agreement is sent to the submitting author when the manuscript is accepted for publication. Unless this agreement is executed, ASM will not publish the manuscript. (U.S. Government employees may file a statement attesting that a manuscript was prepared "as part of their official duties.")

Reprints

Each contributor will receive up to 1,000 free reprints of his contribution; additional reprints (in multiples of 100) may be purchased if desired. An order form showing the cost of reprints will be sent with the proof.
